

# Critter Quitter® Vent Repair

- ➔ Repairs Damaged Plumbing Vents Without Removing Shingles
- ➔ Keeps Frogs, Rats, and Other Animals Out of Toilets and Plumbing
- ➔ Injection Molded UV Stabilized Polypropylene Construction for Long Life
- ➔ Can be Used on Damaged and Non-Damaged Vents
- ➔ Embossed Pitch Lines for Easy Cutting
- ➔ Anodized Black Stainless Steel Screws Included

Critter Quitter® Vent Repair was developed to allow a quick and easy repair of damaged plumbing vents. This is accomplished by a patented internal component that directs rain into the vent pipe keeping the damaged portion dry. No removing shingles, simply cut to match the roof pitch and slide onto the damaged vent. Tighten the screws and the job is complete.

In addition, plumbing vents are a major access point for frogs, rats, and other animals to enter homes plumbing and particularly toilets. Critter Quitters® solve this problem also. The internal component creates a screen that keeps these animals out.

Construction is fully injected UV stabilized polypropylene. This is one of the most UV resistant plastics known and will provide decades of protection. The unit comes with embossed pitch lines to make field cutting to match roof pitch quick and easy, and comes with 4 black anodized stainless steel screws to provide a secure mounting. The unit is attractive and can be painted if desired.

Below (left) is an actual, squirrel-damaged vent and (right) a Critter Quitter® covered vent.
